

Vincent B. Pacaña

Full Stack Software Developer

vincentpacana0@gmail.com

Cebu City, Philippines · 0929 325 2175 · Open to remote roles; overlaps US & APAC hours

github.com/beansint · linkedin.com/in/vincentpacanab · vincentpacana.com

B.S. Information Technology, Cebu Institute of Technology - University · AWS Academy Graduate: Cloud Architecting & Cloud Foundations

Full-stack developer shipping production SaaS and AI systems with TypeScript, JavaScript, React, and Java, in Agile teams, who explains technical decisions to non-technical clients and stakeholders in plain language.

Experience

Full Stack Developer - Hayahai (Ferry Booking & Transport-Management Platform)

2025 - Present

- Full-stack developer on a production ferry-booking platform that lets 7 ferry operators sell tickets online instead of only at the pier: built the web apps with **TypeScript**, **JavaScript**, **React (Next.js)**, **HTML**, **CSS**, over **RESTful APIs** on NestJS, PostgreSQL (**SQL**), and Redis.
- Work in an **Agile Scrum** team - sprint planning, code reviews, and incorporating feedback - using **Git**, **GitHub**, and **CI/CD pipelines** (Azure DevOps), and walk non-technical ferry-operator staff through new features in plain language.
- Built the realtime seat-selection system end-to-end with **React** and **WebSockets**: live seat holds with automatic expiry so two passengers can never pay for the same seat.
- Built the core of the **Flutter** passenger mobile app - authentication, trip search, booking, and offline e-tickets so passengers can board without signal or printed tickets; now in review for the Apple App Store and Google Play Store.
- Shipped a multi-tenant **AI chat assistant (LLM)** that answers passenger questions about trips and bookings, reducing routine questions reaching operator staff.

Remote Freelance Full Stack Developer

2025 - Present

- Owned the payments layer for **Studyboost**, an AI study platform for a US client, working in a 4-person **Agile** team: built **Stripe** subscriptions, a document marketplace, and automatic creator payouts (Stripe Connect) so subscribers are never double-charged and creators always receive their revenue share - even through retries and outages; also helped migrate the backend from **Java (Spring Boot)** to NestJS.
- Delivered **Three H Redwood International School's** live website end-to-end from the requirements of non-technical school staff - design, build (**React**, **Next.js**, **HTML**, **CSS**), official **.edu.ph** domain, and technical **SEO** that reached a first-page Google ranking (avg. position ~3), so parents can find and enroll in the school online.

Projects

QueuePilot - Agentic AI Support-Triage System (client proof-of-concept)

2026

- Solo-built and shipped** an **agentic AI system in Python** that reads an incoming support ticket, finds similar past cases, and decides on its own whether to draft a reply, ask a clarifying question, or hand off to a human - so support staff only see the tickets that need human judgment.
- Designed the agent's decision flow with **LangGraph** and validated it with a **LangSmith** evaluation loop (drafted replies score ~88% when graded by an independent **LLM (large language model)** judge); deployed as a Docker service with **GitHub**, **CI/CD (GitHub Actions)**, auth, and rate limiting.

Python, FastAPI, LangGraph, LangSmith, Pinecone, React, TypeScript, Docker, GitHub Actions

Wildcat Radio v2 - Lead Developer, Production system

Cebu Institute of Technology - University, 2025

- Solo-led and built a complete rebuild** of the university's public internet radio station (~10,000-student community) as the **sole developer**, coordinating with station staff and replacing an unreliable legacy system with a production system whose recurring cost stays near zero - audio on **Cloudflare R2 (cloud storage with zero egress fees)** and an Electron desktop studio app that encodes locally so streaming never touches the cloud bill.
- Built the NestJS backend, live audio streaming, and a realtime layer (**WebSockets**) for chat, song requests, polls, and listener presence, with single sign-on and moderation.

Next.js, React, NestJS, PostgreSQL, WebSockets, HLS streaming, Cloudflare R2, Electron

- **Solo-built** a **RAG (retrieval-augmented generation)** app in **React, TypeScript** that answers plain-English questions about official sports rulebooks (NBA, NFL, MLB, FIFA) with cited, source-grounded answers, with a pluggable **LLM**-provider system and per-query cost tracking to keep AI spend visible.

Next.js, React, TypeScript, Supabase, vector search, embeddings, LLMs

textpour - Open-Source Library, Author

TypeScript / npm, 2025

- Authored and **published an npm text-layout library** in **TypeScript** that flows text into arbitrary shapes, solving a problem the web platform never shipped natively.

npm: npmjs.com/package/textpour · **Code:** github.com/beansint/textpour

Skills

Languages: TypeScript, JavaScript, HTML, CSS, Java, Python, Dart, PHP, SQL

Frameworks & Tech: React, Next.js, NestJS, Spring Boot, Flutter, Node.js, Django, Flask, FastAPI, REST APIs (RESTful APIs), GraphQL, WebSockets, PostgreSQL, Redis, MySQL, Tailwind

AI / LLM: RAG, hybrid retrieval, embeddings & vector search (Pinecone, pgvector), LangGraph (agent orchestration), LangChain, LangSmith (evaluation & observability), OpenAI / Gemini / Claude APIs, MCP, prompt engineering

Cloud & Infra: AWS, GCP, Vercel, Netlify, Render, Cloudflare (R2), Neon, Docker, GitHub Actions, microservices, Linux

Practices: Agile, Scrum, DevOps, CI/CD, Git, GitHub, code review, technical SEO, Core Web Vitals, GA4, Search Console, DNS, SSL/TLS, JWT/OAuth/SSO

Tools: Azure DevOps, Linear, Claude Code, VS Code, Cursor, IntelliJ, Postman

Awards & Certifications

- **Champion**, Proweaver Promptquest Hackathon 2025 (built a web game in 4 hours) · Nov 2025
- Capstone **Top 11 Finalist**, PitchPerfect 2025, qualified for LaunchLab Pre-Acceleration (CIT-U) · Nov 2025
- AWS Academy Graduate: Cloud Architecting (Dec 2025), Cloud Foundations (Sep 2025)
- Codechum Java & C Programming Certifications (Jun 2024)

Education

B.S. Information Technology - Cebu Institute of Technology - University

- Coursework: Data Structures & Algorithms, Web & Mobile Development, Database Design, SDLC, System Integration, Information Assurance & Security
