Full-stack developer building production SaaS and AI-powered systems: microservices, realtime platforms, and performance-focused web. Comfortable across TypeScript and Java backends, React/Next.js and Flutter frontends, and cloud deployment.

Technical Experience

Full Stack Developer - Ayahay V2 (Ferry Booking & Transport-Management Platform) Jan 2026 - Present

- Full-stack engineer on a production logistics SaaS built as **microservices**: Next.js web apps for operators, admins, and passengers plus a **Flutter** mobile app, over **NestJS** APIs with PostgreSQL and Redis, supporting **7 ferry operators across 30 routes, 19 ports, and 14 vessels**, each on its own independent tenant database.
- Built an **event-driven data-sync system** that keeps multiple services' databases consistent using a transactional outbox pattern over Redis, with per-tenant routing and automatic retries.
- Built the **realtime seat-selection system** end-to-end: an operator seatmap builder and a customer seat picker with live seat holds over WebSockets and automatic expiry, preventing double-booking under load.
- Building the core of the **Flutter marketplace app**: navigation and design system, authentication, trip search, and the booking flow with offline e-tickets.
- Owned trip, vessel, and route management with automatic schedule/ETA updates, and shipped a multi-tenant AI chat assistant.

Remote Freelance Full Stack Developer Feb 2025 - Present

- Delivered Three H Redwood International School's live website end-to-end, including registering and configuring the school's official **.edu.ph domain**, DNS, and SSL.
- Building a full-stack e-commerce platform (**Studyboost**) for a Florida-based US client with a 4-person team, contributing to the backend migration from Spring Boot to NestJS, plus **Stripe** payment integration and an affiliate program.

Projects

Three H Redwood International School, Inc. - School Website Full-stack + SEO

- Translated the school's public-presence and discoverability goals into a complete **static website**, designed and built end-to-end on Next.js / Vercel.
- Set up full technical **SEO** with Google Analytics + Search Console, reaching a **first-page Google ranking (avg. position ~3)** within months of launch.
- Achieved a **perfect 100 Lighthouse score on desktop** across every page and took mobile from the high-60s into the mid-90s, through image, caching, and asset-loading optimizations.

Wildcat Radio v2 - Lead Developer, Production system Cebu Institute of Technology - University

- **Led a complete rebuild** of the campus internet radio station at Cebu Institute of Technology - University, a public, web-based station serving the university's ~10,000-student community, replacing an unreliable, insecure legacy version with a **near-zero-cost production system** on modern cloud infrastructure.
- Built the NestJS backend and live audio streaming, a realtime layer for chat, song requests, polls, and live listener presence (WebSockets), single sign-on, multilingual moderation, and a desktop studio app for broadcasting.
- *Next.js, NestJS, PostgreSQL, WebSockets, HLS streaming, Cloud storage*

SportRules AI - AI Rulebook Q&A

Full Stack Developer

- Built a **RAG (retrieval-augmented generation)** app that answers natural-language questions about official sports rulebooks (NBA/NFL/MLB/FIFA) with cited, source-grounded answers.
- Designed a **pluggable system supporting 5 different AI providers** with per-query cost tracking, swappable through configuration.
- *Next.js, TypeScript, Supabase, vector search, embeddings, LLMs*

textpour - Open-Source Library, Author (personal hobby project)

- Authored and **published an npm text-layout library** that flows text into arbitrary shapes (circles, holes, letter outlines), solving a problem the web platform never shipped natively.
- *TypeScript, Canvas, computational geometry*

Block Notes - Lead, Full Stack Developer

- Built a **Web3 note-taking app** integrating secure crypto-wallet signing on the Cardano blockchain, with a Django backend tracking transactions, keeping private keys safely client-side.
- *Python, Django, JavaScript, Cardano blockchain*

Skills

Languages: Java, Python, TypeScript, JavaScript, Dart, PHP, SQL, HTML, CSS

Frameworks & Tech: Next.js, NestJS, Spring Boot, React, Flutter, Node.js, Django, Flask, FastAPI, REST APIs, WebSockets, PostgreSQL, Redis, MySQL, Tailwind

AI / LLM: RAG, embeddings, vector search, LangChain, OpenAI / Gemini / Claude APIs, MCP, prompt engineering

Cloud & Infra: AWS, GCP, Vercel, Cloudflare, Neon, Docker, microservices, Linux

Web & Security: Deployment, SEO, Core Web Vitals, Google Analytics/Search Console, DNS, SSL/TLS, JWT/OAuth/SSO

Tools: Git/GitHub, Azure DevOps, Claude Code, VS Code, Cursor, IntelliJ, Postman

Awards & Certifications

- **Champion**, Proweaver Promptquest Hackathon 2025 (built a web game in 4 hours) · Nov 2025
- Capstone **Top 11 Finalist**, PitchPerfect 2025, qualified for LaunchLab Pre-Acceleration (CIT-U) · Nov 2025
- AWS Academy Graduate: Cloud Architecting (Dec 2025), Cloud Foundations (Sep 2025)
- Codechum Java & C Programming Certifications (Jun 2024)

Education

B.S. Information Technology - Cebu Institute of Technology - University

Graduated 2026

- Coursework: Data Structures & Algorithms, Web & Mobile Development, Database Design, SDLC, System Integration, Information Assurance & Security
